

Restore Data Fast from Ransomware Attacks and Insider Threats

Ransomware and Insider Protection

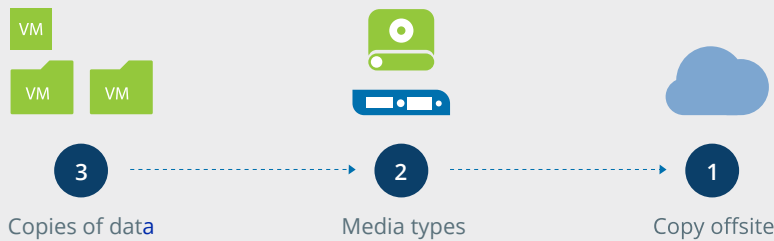

Ransomware: A \$20 Billion Per-Year Criminal Industry

Risk of data loss through purposeful deletion, encryption and corruption is a real and present danger.

Your 1st Defense: Protect Your Production Data

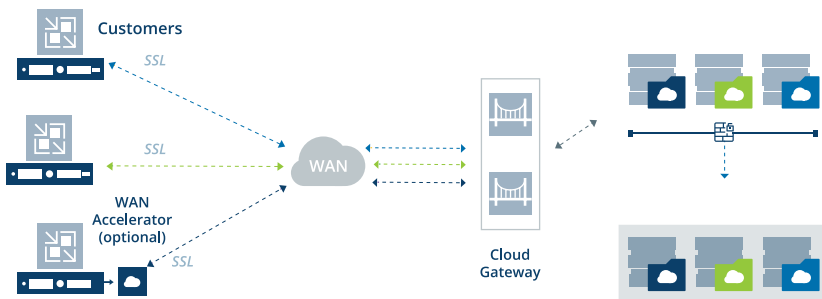

Follow 3-2-1 best practice

- 3 Copies of the data
- 2 Separate media
- 1 Offsite

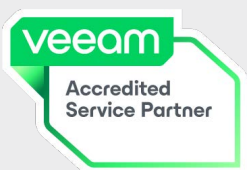

Your 2nd Defense: CyberFortress Ransomware and Insider Protection

Savvy attackers encrypt or delete your backup and archive data, leaving you nothing to recover. Consequences are crippling – damaging your reputation, operations, and bottom line. CyberFortress' Ransomware and Insider Protection enables recovery from encrypted or deleted backups by providing an isolation layer.

How Ransomware and Insider Protection Works:

- Expired/deleted backups, intentional or malicious, move to CyberFortress repositories.
- Repositories keep "deleted" data safe for a predetermined time with restricted employee access.
- Removal only occurs when preset policy rules allow.
